

PLACEPRO — CAMPUS PLACEMENT MANAGEMENT PORTAL

Formal Product Submission Document (Academic Evaluation & Project Delivery)

Project Name:	PlacePro Campus TPO Management Portal
Developer Name:	P.N.V. Hari Surya Prakash Reddy
GitHub Repository:	https://github.com/pnvharisuryaprakashreddy/PlacePro
Live System URL:	http://localhost:8080 Prometheus: http://localhost:8080/metrics
Technology Stack:	Node.js, Java, HTML5, Vanilla CSS3, JavaScript (ES6), Chart.js, Prometheus

1. Executive Summary

PlacePro is an enterprise-grade, centralized Training & Placement Office (TPO) Management System engineered to automate and streamline the entire university placement lifecycle. It eliminates manual spreadsheet tracking, scattered email threads, and paper registers by providing a unified, role-separated workspace portal for Students, Placement Officers, Corporate Recruiters, and System Administrators.

2. Problem Statement & Core Value Proposition

- **Spreadsheet Chaos & Human Error:** Placement officers spend days cross-referencing CGPA cutoffs, active backlogs, and branch eligibility manually.
- **Lack of Student Transparency:** Candidates miss deadlines and have zero visibility into their application timeline.
- **Inconsistent Recruiter Coordination:** Corporate recruiters receive shortlists in disorganized email threads.
- **PlacePro Solution:** Features an instant rule-based eligibility engine, 1-click application submission, live status timeline tracking, and Prometheus observability.

3. System Architecture & Tech Stack

Component / Layer	Technology Used	Functionality & Scope
Backend Web Service	Node.js & Java	Handles REST API routes, eligibility rules engine, and /metrics exposition on port 8080.
User Interface (Frontend)	HTML5, CSS3, JavaScript	Single-Page Application with dark glassmorphic theme, dynamic forms, and modal popups.
Analytics & Metrics	Chart.js & Prometheus	Interactive department bar charts, recruiter offer doughnut graphs, and log telemetry.
Data Storage & Persistence	REST API & Local Storage	Persists student profiles, applications, corporate drives, and interview decisions.
Execution Script	Shell Script (run.sh)	Automated 1-click launcher script running on http://localhost:8080.

4. Module 1: Student Placement & Self-Service Portal

Empowers students to manage academic profiles (CGPA, Branch, Backlogs), explore active corporate drives, verify eligibility rules in real-time, submit 1-click applications, and track application progress (APPLIED -> SHORTLISTED -> SELECTED).
